

Gemstone Cabinetry, LLC

Policy and Specifications Manual 2025

Welcome to Gemstone Cabinetry. Gemstone is an aggressive brand of cabinetry that embodies the latest tastes and trends in contemporary and transitional American cabinetry designs. Gemstone Cabinetry consumers value a modern or transitional styling, highest quality finishes with broad selections, and an exceptional European, full overlay, all wood cabinet construction. Gemstone Cabinetry is truly custom tailored and manufactured to order for their unique needs and decor.

About us

Gemstone Cabinetry is a provider of custom European cabinetry for home and commercial use based in Southwest Florida. We have a heritage of nearly 40 years of continuous manufacturing of production frameless cabinetry and have supplied some of the largest names in the home building industry. Our factory is modern and automated to bring cabinetry to the market that is not only beautiful, but well made, affordable, and sustainable.

Policy and Specification Manual 2025

Purchasing from Gemstone Cabinetry

Gemstone Cabinetry is sold through authorized dealers as well as to qualified national accounts. Any purchasing customer is required to complete the new customer information form and purchase a sample starter kit that will aid in effectively demonstrating our product to end users and customers.

NEW CUSTOMERS

Information Form

The information form must be completed in its entirety and submitted for approval of the sales manager in order to gain “authorized dealer” status. The form is available on the website in our “dealer portal” tab on the Home Page. No dealer login or online profile is required but a password is required to access downloads. The password is provided only to dealers (or potential dealers). Dealers are notified by email of periodic updates to any downloads available on the site. The New Customer Information Form may be filled out online and submitted electronically by email, or the PDF version may be downloaded, printed and completed by hand to be emailed, presented in person, or mailed in to our office.

Sample Startup Kit

The required sample starter kit contains a Gemstone compact base cabinet sample, 15 cabinet sample doors in assorted finishes and door styles, specification manuals, and a finish chip set. The chip set represents roughly 150 of our most popular color and finish selections. The dealer cost of the sample starter kit is \$699. Literature and other printed sales aids will also be included and replenished at no cost. Additional sample doors may be obtained as needed at \$45/each. Please use *Literature/Sample Order Form* to request any samples needed. (6 additional sample doors may be substituted for compact sample base cabinet if desired). Additionally, 6 free sample doors may be provided on demand at no cost each year to help dealers build their sample library. Finishes that are not included in the sample set may be requested at a cost of \$4 each. Between wood selections, stain or paint selections, glazing choices, and effects, there are thousands of finish combinations available, so it is impractical to have available every finish in the sample set. We believe that the sample chip set well represents the latest in what cabinet buying customers are currently looking for, making Gemstone an easy choice among consumers.

Display Policy

Dealers are encouraged to place full working displays in their showrooms that will best convey the essence of the latest in European kitchens from Gemstone Cabinetry. Discounted display cabinets are available for this purpose. Submit your design for approval to receive a 40% discount. Final costs are based exclusive of shipping and taxes.

Display program is only available for showrooms. Builder models will not qualify as showrooms, but considerations or proportional concessions may be made on a case-by-case basis.

2 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Payment Terms

Payment terms for all dealers are assumed to be 50% payment accompanying any order when placed, followed by the balance due upon delivery of the product. Orders may not be scheduled for production until accompanying initial payment has been arranged. Payments may be made by ACH by following the link and prompts in invoice emails and this method of payment is preferred. However, company check, credit card, or Paypal payments are accepted. Credit card payments carry a 3% convenience fee. Contact will be made by our customer service team on the day prior to delivery for confirmation of payment availability for the following day's scheduled delivery. If confirmation cannot be obtained for the delivery, shipment may be delayed until the next scheduled truck for your area.

Under certain circumstances, we may send a "Notice to Owner of Intent to Lien" as extra security for payment terms for large projects or non-standard payment terms. A NTO form will be provided and completed in advance by customers so all pertinent information is on file for the project. Dealer cooperation is expected to enable products to flow smoothly to the job without delays.

Gemstone Cabinetry reserves the right to alter these standard terms for any dealer on a case-by-case basis to determine the best fit for each customer. It is our goal to have a workable arrangement with all of our dealers that will be best suited for successful problem-free transactions.

Sales Tax

Please indicate on the Customer Information Form your sales tax exemption status. If tax exempt, a sales tax exemption certificate must be provided. Without exception, we are required to collect Florida sales tax when delivering within Florida unless the certificate is provided. Tax rates are determined by delivery destination county local rates. Out of state sales taxes are governed by the local tax laws and it is the responsibility of the customer to comply with their state tax laws.

3 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

SHIPPING

Shipping Charges and Zones

Delivery of Gemstone Cabinetry products is made with our own truck, common carrier, or may be picked up by customers at the factory. RTA orders and shipments outside of Florida will be shipped by common carrier and will be billed freight collect. Pallet shipments incur an additional packaging charge of \$65 per pallet. Please note a preferred common carrier on your order if desired and we will accommodate your needs.

Shipments made using Gemstone Cabinetry trucks will be scheduled on a “when cabinets are completed” basis. Shipping charges are assessed on a “per cabinet” basis. Please consult the diagram or the Excel Estimating and Ordering Form for shipping charges. Minimum shipment values are calculated by our delivery policy to each zone, but common carrier may be utilized in some instances for the most timely, cost effective and reliable delivery.

4 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Packaging for Shipment

Cabinets are packaged using stretch wrap with foam sheet protective barriers where needed to protect finished surfaces. All products are labelled for easy identification and placement of cabinets at the job. Receivers outside our delivery area will be charged shipping by custom quote and may opt for RTA shipment.

RTA shipments are palletized where parts are nested for the most efficient use of space to ensure safe transport without damage. Parts are not necessarily nested together by cabinet but are labelled for identification. When receiving an RTA shipment, it is best to unpack the entire pallet before beginning the assembly process. Please notify us of any missing or damaged parts discovered and we will expedite replacement parts within 1-3 days. Replacement parts will be shipped UPS without shipping charges.

Delivery Policies

All deliveries are made to warehouse locations unless arrangements are made with our shipping department. Additional cost of \$250 is assessed for special shipping arrangements such as residential or jobsite deliveries (Please choose "YES" from the drop down next to "Jobsite Delivery" in the shipping information of the Order Form for this option and provide a valid delivery address).

Note: Due to insurance restrictions, under no circumstances are our drivers permitted to carry products onto job sites or into buildings. They are limited to handing product off at the tailgate of the delivery truck. Adequate unloading and product placement personnel are the responsibility of the customer. If no one is present to receive delivery, we may return to the factory and reschedule delivery on another date mutually agreed upon. Additional delivery charges will be assessed.

ORDERS

Excel Order Form

Gemstone Cabinetry provides dealers with a job estimate generating worksheet (**Order Form**) that calculates pricing automatically. The worksheet is available by download on the website or can be emailed to the customer. The estimate generating worksheet is a Microsoft Excel worksheet that can be used by anyone with Excel 2007 or newer version (or Office 2007 which includes Excel 2007).

The estimate generator is designed to create easy and timely estimates for customers by dealers. The form utilizes drop down lists to populate from available selections and makes its calculations in a dynamic form that can be altered by revising selections at any point.

Begin your estimate by filling in the upper **header** section of the form with your customer and job identifying information. The pricing displayed is net, after multipliers and adjustments. Sales tax is automatically calculated based on the sales tax county selected from a dropdown list in the heading section. Likewise, shipping charges are automatically calculated by selecting the delivery county from the dropdown list in the shipping area in the heading section. A sales tax county and delivery county must be selected to provide job totals at the bottom. We recommend filling in your customer information and then saving as a template for future estimates to save time without having to fill in the same information each time.

The first cell on the left below the Gemstone Logo is labeled “Total # Sheets”. The drop down allows a selection of up to 9 separate forms for use in the same job. When activated by selecting the number of forms, additional forms are generated automatically and reveal page tabs along the

bottom margin of the form. This feature provides for differences in selection of material, door style and finish color, or room designations to be isolated on each form for organization or ordering purposes.

6 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

	MATERIAL	WHybrid_SC	
	FINISH	WHITE_SC	
	COLOR	White	
	EFFECT 1	None	
Custom Dimensions		Custom Add	
Width	Height	Depth	%List \$List QTY Net Cost

The grey and white areas of the top header section is used to designate the job/room specifications for “Job Name”, “Room Name”, “Cabinet Box Material”, “Drawer Box”, “Drawer Slide”, “Door Style”, “Door Details”, “Material”, Etc. Please make sure selections are made in each box to ensure the form properly calculates the pricing. Please begin at the top and make selections moving down. By working in order, the available selections are set by selection made in the previous cell, so it is important to go in order from top to bottom. Door style reference images are available to the right of the comment area by resting the mouse pointer on a door style name.

The list of required cabinets and items are then populated by use of dropdown lists that sort and make selection easy and reliable. Some items are not available depending on a door style or finish selected in the heading section. For example, if a melamine laminate finished door has been selected, corbels and millwork items or mullion glass door cabinets would not be available as they would have been if a solid wood finished door was selected. Please keep this in mind if you find that the item you need does not appear for selection.

Please refer to the following item tree on pages 8-9 which diagrams the categories and lists to familiarize yourself with where to find certain items. Make selections in order working left to right through the lists for Cabinet Type, Door and Drawer configuration, and Cabinet Size. A price will then be displayed to the right.

Jobsite Delivery Yes		PO#	
Cabinet Type	Doors & Drawers	Cabinet Size	Finish Ends
1 Base	2D/1Dr	30W 34.5H 24D	662 Left
2			
3			
4			

Matching finished ends (and wall bottoms) may be designated in the next cell moving right and the cost is again recalculated. Cabinets are catalogued in 3” incremented sizes from 9”-48” in width, and 3” or 6” increments in height. Sizes may be customized by simply specifying the next largest catalog size of the size needed and then editing the custom dimensions downward to the required dimension. If no edits are made, the size manufactured will be the size listed in the “Cabinet Size” column, so if no customization is needed, you don’t have to fill in any sizes.

Finish Ends		Custom Dimensions		Custom	
		Width	Height	Depth	%List
Left		29			

Gemstone is a custom manufactured-to-order product line, and we pride ourselves on our ability to meet unique and special requirements of our customers. Our automatic pricing takes most customizations into account and charges are self-generating and user friendly. However, certain customizations require additional charges that are to be listed as items in the quote. These items are detailed in the “Modifications” section. On some occasions, special consideration is given to customizations required that have no previously formulated customization charge (due to the unique nature of the request.) Contact customer service in these unique situations where we can determine the appropriate cost of a customization charge by either an additional percentage or flat rate charge or even a combination of both. The percentage or flat rate charge can be manually applied in the two “custom add” columns following custom dimensions columns.

7 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Any additional non- catalog parts that are needed should be entered in the “Special Parts” area designated. Finally, any notations of special handling or other customizations should be provided in the “Line Item Instructions” areas in the right column next to each item.

Order Procedure

Although products are manufactured using the data provided on the order form, drawings of special modifications and room layouts are welcome as accompanying documentation. Please remember though that contents of a confirmed and signed order is what will be produced, so be sure that your confirmation is correct and clear before signing and releasing to production. Once your job is finalized, submit your order. All orders must be placed in writing and verbal orders (and texts) will not be accepted. Gemstone has no capability to receive orders by fax. The preferred method for placing orders will be by email. Liability for errors in order placement will ultimately be the customer's responsibility. We confirm receipt of the order and final audit of pricing and accuracy will take place before confirming to the customer. This ensures accuracy and corrects errors that can occur. Confirmations will be sent by email. Please acknowledge the confirmation by signing off and returning by response to email. Any changes made to a confirmed order beyond 3 working days past sign off may incur charges. It is imperative that orders be submitted on the most current Excel Order Form. Use of outdated order form versions should be avoided and will not be accepted for orders. Gemstone does not provide quotes from drawings provided. It is the responsibility of the dealer to do their own take-off from their drawings.

Payment

Payment for 50% of the confirmed amount should be received within 3 business days to avoid a shipping date delay. Orders will be confirmed within 24 hours, so if your confirmation has not come back to you as expected, please notify us to prevent communication errors or resulting delays.

Payments may be made by check, ACH, or credit card. Invoicing is transmitted by email. A link is provided in the email that allows for payment by Credit Card or ACH bank transfer. All email job invoices default to ACH payment method. If a credit card is desired for payment, please let us know. A 3% convenience fee will be added for credit card transactions.

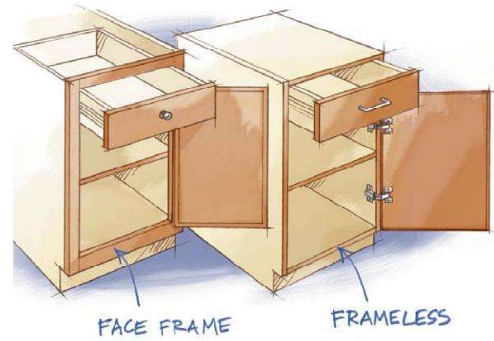

Product Specifications

Box Construction

Gemstone Cabinetry is manufactured in Florida in a modern factory utilizing CNC equipment and other digital production enhancements. Cabinets are full overlay, frameless, full access design. By not using face frames on the front of our cabinets, the openings are larger and unrestricted.

This allows for maximization of storage space and easier access.

Frameless style construction also demands precision in the manufacturing process and more robust materials. Tight fitting precision machined parts and thicker, heavier materials means high quality, longevity, and durability are engineered into every Gemstone Cabinet.

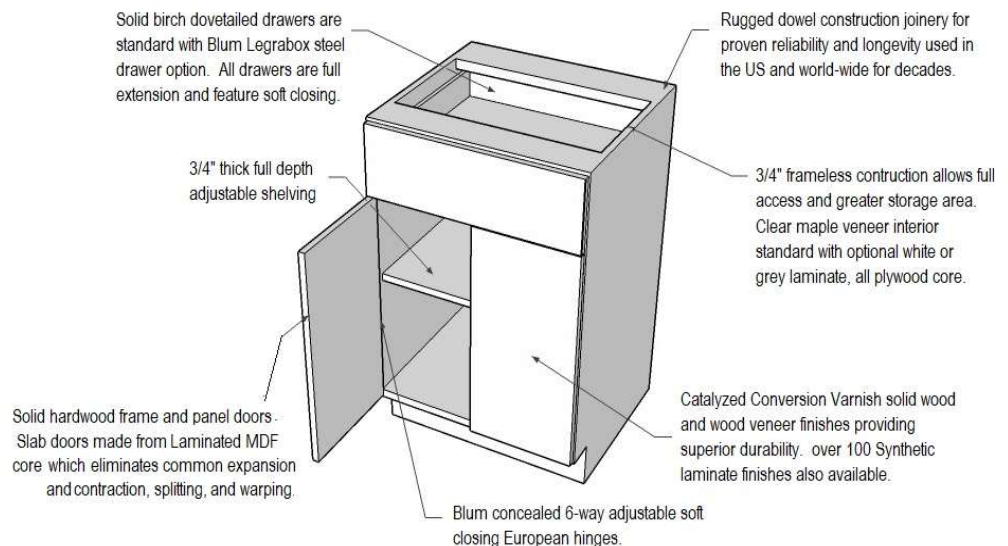

Case Design

Gemstone Cabinetry features full overlay fronts on a frameless, European style cabinet box, with traditional American stretchers, hanging rails, and notched toe kicks. Cabinets may be produced without toe kicks by request for use with leg levelers or ladder type toe kick platforms. Gemstone offers adjustable leg levelers but does not supply ladder toe kicks.

Components

Frameless design cabinetry is largely panel based, rather than solid hardwood. The use of plywood and other panel or sheet products is efficient, cost effective and strong. Surfaces are smooth, easy to keep clean and stand up to rigorous use for many years. All cabinet joinery features compression dowel construction. Backs are captured in a dado with hanging rails located behind the recessed back offering clean, uncluttered interiors. All hardware is mounted into predrilled holes providing precise, efficient placement onto components prior to case assembly. Proper placement and alignment of hardware components assures smooth operation of drawers and doors with less wear and tear, extending their life for generations.

12 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Front edges of cabinet boxes are finished with durable PVC to match the outside finish of the cabinet. Edgebanding is machine applied and is flush trimmed and buffed to smooth finish.

Finished sides and wall bottoms

Bottoms of wall cabinets, while finished, are not considered “finished wall bottoms”. The finish is that of the cabinet interior. Matching finished wall bottoms can be obtained by selecting this option when selecting finished sides on each applicable item in the estimate generator. Outside faces of cabinet sides are finished to match the interior of the cabinet. Where an exposed matching finished side is required, make the appropriate selection on the estimate generator. Finished sides and wall bottoms are matching type, specie and finish to the door finish selected.

Open cabinets automatically receive an interior finish to match the specified exterior finish as do all glass door cabinets.

Materials

All cabinet sides, tops, bottoms, shelves, and rails are made from $\frac{3}{4}$ ” plywood while backs are $\frac{1}{4}$ ” plywood.

Plywood panels have been used in cabinet construction for many years. Plywood is made by stacking thin wood veneers and pressing together with adhesives and high pressure to form a rigid panel. The direction of the veneer layers alternates at right angles to each other and when bonded all together they form an exceptionally strong and stable panel. Plywood is generally considered superior to particle board. There is no inferior

Chinese plywood in our cabinetry that can compromise the indoor air quality of your home. Interiors are light and bright and uniform in appearance making stored items easier to see and locate

grain

Chinese plywood in our cabinetry that can compromise the indoor air quality of your home. Interiors are light and bright and uniform in appearance making stored items easier to see and locate

Gemstone cabinetry is manufactured with a choice of 2 interior materials, all $\frac{3}{4}$ ” plywood core construction:

Gemstone Maple – UV cured natural finished, US produced maple veneered plywood

Gemstone White – White cabinet liner High Pressure Laminate on plywood

Shelves

All shelves are $\frac{3}{4}$ ” thick, full depth, and are fully adjustable for versatile and effective storage. Shelf support pins are steel and are placed into predrilled holes for precise location. Shelves are wrapped separately for delivery so please keep track of them until installation is completed and shelves are placed inside cabinets. Gemstone is not responsible for lost shelves after delivery unless noted on the packing list when received.

13 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Drawers

Gemstone Cabinetry is on the cutting edge of cabinet hardware technology and features. Drawers and roll out trays feature full extension travel with soft closing system as standard. All drawer runners are concealed from view under the drawer box. Full extension travel means no more lost items in the rear of the drawer. Soft closing mechanisms eliminate unnecessary noise and shifting contents. We offer two different systems for drawers:

Solid wood drawers are manufactured using 5/8" solid birch hardwood sides, fronts, and backs with 1/4" plywood bottoms and feature dovetailed construction. Dovetails are commonly associated with traditional wood joinery that dates back hundreds of years. Our use of dovetails pays homage to the longevity and superiority of this method of joining solid wood pieces. Dovetail joints provide strength and durability while allowing the wood to expand and contract when necessary, keeping the joint tight and solid. Dovetailed drawer boxes feature Genuine BLUM Tandem full extension slides - the gold standard in soft closing runner systems with a lifetime guarantee.

Double-wall metal is state-of-the-art European drawer box system that features double-wall metal drawer box sides with matching 5/8" melamine laminated bottom and back. The look is clean and very modern while the motion is smooth, silent and soft-closing. There are matching storage accessories available to complete the system.

Optional Tipon™ features motion technology for drawers and doors. Tipon is a press and release action that allows cabinets to be installed and used without handles or knobs. Tipon uses a spring action tipping the fronts open so the edge can be gripped and pulled open manually.

JOB NAME	NEW OFFICE	ROOM

Tipon for doors must be added to the order as an item

like any other accessory utilizing the item library drop downs, then quantifying the number of doors affected. Similarly, Tipon for Aventos lift doors must be added the same way. Tipon spring tension touch latches require actively pushing doors closed to “reload” the spring mechanism for the next activation. Therefore, soft closing doors along with Tipon is not an option.

Hinges

Hinges provide a 110d opening featuring soft close action. Naturally, hinges are concealed and have 6-way adjustment built in so uniform spacing and alignment of doors is easily achieved and maintained for a true full-overlay look. Gaps between our front panels are just 1/8” requiring precision adjustments of the hinges to bring doors and drawers into perfect alignment.

Volante Series cabinet boxes

Gemstone Volante Series features the integration of horizontal and vertical recessed aluminum profiles that allow for finger pull fronts without handles that are usually necessary with frameless style cabinets.

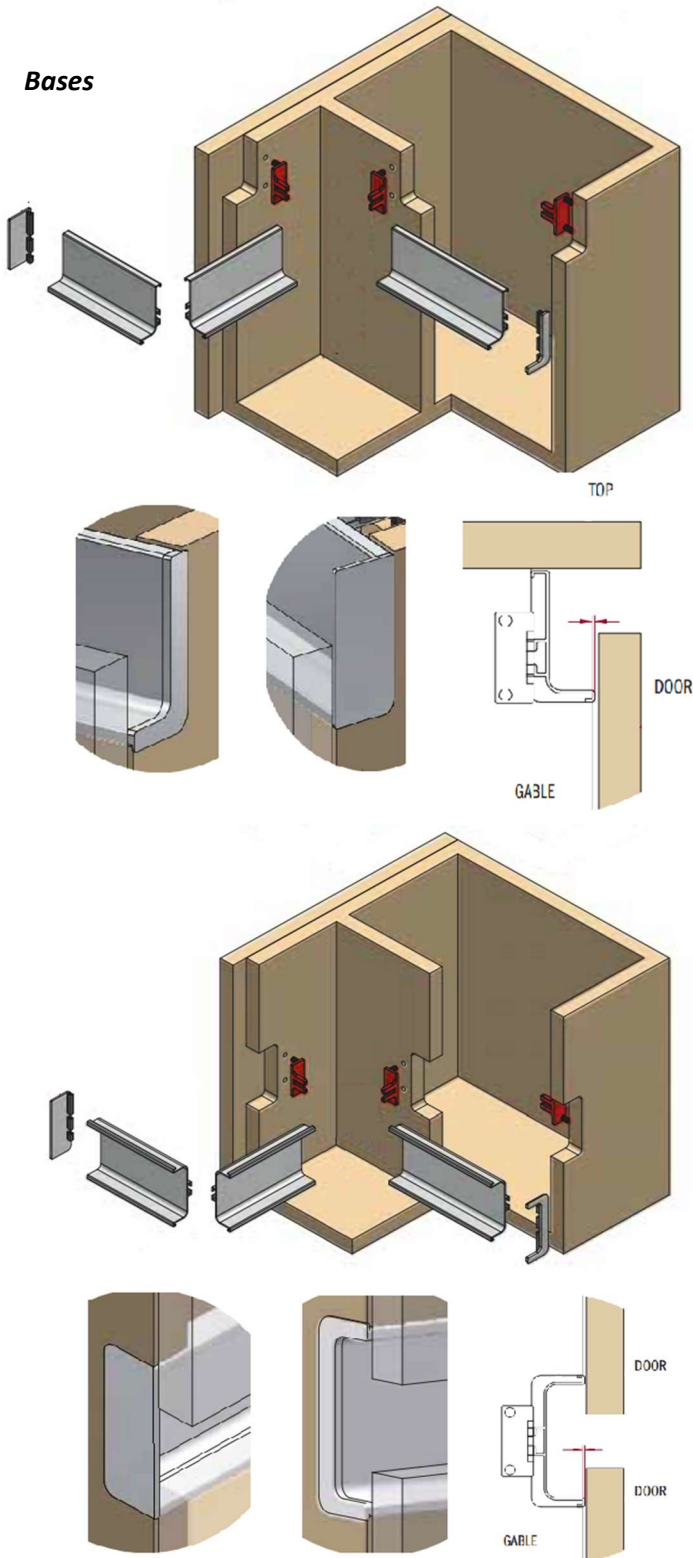

Cabinet sides are pre-milled at the factory to accept Volante extruded aluminum profile mouldings. Volante aluminum is ordered separately in lengths of up to 173", and is installed the same way toe kick covers or other mouldings are ordered for field fitment and placement during cabinet installation. Moulding profiles and application of Volante concept is detailed in the following illustrations:

Sizing

Gemstone Cabinetry is manufactured to order and can be custom sized to fit specific needs. Standard sizing is as follows, but if you don't find the size you need in the library please consult with us. Typically, when a custom dimension is required, please select the cabinet with the next larger dimension, then fill in the custom size in the appropriate field on the order form. Widths cannot be increased beyond their catalog dimension; however, heights and depths are able to be increased beyond standard. A corresponding charge is calculated by the form and will automatically be applied when these instances occur.

<i>Type</i>	<i>Width</i>	<i>Height</i>	<i>Depth</i>
<i>Bases</i>	<i>3" increment; 9-48" typical</i>	<i>34.5"</i>	<i>24"</i>
<i>Walls</i>	<i>3" increment; 9-48" typical</i>	<i>3" increment; 12-60"</i>	<i>13",24"</i>
<i>Aventos Walls</i>	<i>3" increment; 24-48" typical</i>	<i>3" increment; 12-42"</i>	<i>13"</i>
<i>Talls</i>	<i>3" increment; 12-36" typical</i>	<i>6" increment; 84-120"</i>	<i>13",16",21",24"</i>
<i>Vanities</i>	<i>3" increment; 9-48" typical</i>	<i>30.75", 34.5"</i>	<i>21"</i>
<i>Wall Hung Vanities</i>	<i>3" increment; 9-48" typical</i>	<i>24"</i>	<i>21"</i>

Note: Cabinets with single width drawers are limited to 39" in width.

Note: Due to panel size limitations, Gemstone White tall cabinets and panels may be slightly shorter in height (95.75").

Toe Kicks

Toe kick dimensions are 4.5" high x 3" deep. "No toe kick recess" may be specified by noting "FLUSH TOE KICK" in the special instruction. No toe kick (toe kicks removed) may also be requested. There is no charge for these options but please keep in mind that Gemstone has available leveling legs but does not provide separate toe kicks (ladder toe kicks).

Recessed toe kick ends can also be requested. To do so, please note in the line notes to recess left, right, or both and provide the recess dimension. In addition, please add a charge line item from the Modifications category and enter the quantity of recessed toe kick ends required (this can just be a total number).

Policy and Specification Manual 2025

Doors

Gemstone Cabinetry doors, drawer fronts, millwork and accessory items are made from high grade domestic hardwoods and a variety of laminated products to suit a wide variety of tastes and budgets.

Solid Hardwood Doors

Wood frame and panel doors are offered in unique door styles to match the needs and tastes of a wide variety of customers. In addition, we may be able to replicate a special door request when competing with other cabinet lines. Many wood door styles can be specified with modified shapes and attributes creating a fully customizable product. Wood doors are available in Maple, Cherry, Alder, rift White Oak, and Walnut. Framing width can also be specified from 2-1/4 – 4” on many solid wood doors. Modified framing width carries

a small charge that is automatically applied when a non-standard width for a particular door style is selected on the header of the order form. Please refer to the door style illustrations and details for specific availability of options.

MDF Doors

Painted doors (Paint Grade) will feature a hard maple frame with a 1-piece MDF center panel for superior finish, longevity and stability, eliminating finish checking that can occur with painted solid wood panels. Some door styles are also available in popular all MDF framing and panel when using painted finishes. Our double-refined, high grade MDF represents superior quality as a material naturally suited for painted finishes in our coastal climate. Please refer to the door style illustrations for specific information about each door and corresponding available materials.

In addition, Gemstone offers 1-piece painted MDF doors in shaker style (Palmetto) and slab styles (Verona).

Hardwood Veneer Doors

Gemstone continues to respond to market demands for simple, modern, slab wood veneer door styles with our new Milano Pura Vita veneer door line. Our Milano slab door features hardwood veneer wood faces that are factory finished in a curated selection of on trend colors and grains. Outstanding color and grain consistency are achieved by utilizing factory pre-finished full panels that are processed into doors and parts.

Thermal Laminated Doors

As a response to ever increasing costs and questionable sustainability of solid hardwood cabinet doors, Gemstone has featured a full line of wood grained and patterned textured thermal laminate doors. Advances in manufacturing technology have enabled us to create alternative finish laminate doors that are so realistic that it is difficult to distinguish them from real wood doors, while keeping the cost lower and reducing the environmental impact of our industry. Textured thermal laminate doors have met with great success as contemporary European styling and rustic reclaimed wood finishes have demonstrated their popularity in the market. Building on that success, Gemstone has revised our finish selection of thermal laminate doors in our new Impression Series, designed to usher in the next generation of thermal laminated doors that look better than the real thing. Available in slab (Impression), shaker Impression Nova) and slim shaker (Impression Terrace) door styles, these high-end laminate finishes achieve consistent color and grain throughout all parts in a cabinet, which has become increasingly challenging when using real wood doors.

Decorative Laminate Veneer (DLV) Doors

Innovations in the development of alternative material for cabinet doors has led to growing public interest in laminated MDF doors. These doors begin as MDF strips that are shaped to form framing stock, then wrapped with a flexible, durable, decorative laminate surfacing material (DLV). Doors are then constructed combining this framing material with matching ¼" center panel material. The result is an astonishingly handsome collection of door selections that are very durable, color and grain consistent, and economically priced. Once the doors are assembled, there is no further finishing required which also speeds lead times along. Finished ends are provided using matching laminate material saving time and money when compared with traditionally finished stained or painted cabinets. DLV doors are a cost-effective alternative to finished wood doors and can easily be substituted where durability and easy maintenance are key factors.

High Gloss and Supermatte Laminate Doors

Gemstone Cabinetry was originally conceived as Metro 3D Cabinetry, to offer modern styled European cabinetry to our dealer base. Polished high gloss finishes are very widely used within this styling genre but formerly were limited to hand polished, multi-step, labor intensive polyester-based finishes. High gloss laminates and coatings as well as edge banding technology have been developed that now provide the same mirror-like surface without the high cost of hand finishing. A new and emerging design trend in Europe and now in North America is Supermatte laminate. These finishes offer silky smooth-to-the-touch surfaces with virtually no reflection at all. Gemstone has launched Reflex - our new offering of high gloss and supermatte laminate selections to include the latest solid colors, woodgrains and patterns.

Note: Matching high gloss and supermatte laminates for finished ends and wall bottoms, finished interiors, etc. are limited in their availability. Selection of these finishes may require the incorporation of deco panels to be applied at installation to cover exposed surfaces, or alternate coordinating materials to be used in manufacturing where required.

In addition, our Prism Paint option in painted finishes offers over 1600 color selections from our Sherwin-Williams fan deck allowing for a custom color match to almost any color required. There is a setup cost of \$250 for Prism custom colors or for a custom match stain. Prism also carries a finishing surcharge on all products (custom stains do not). Charges relating to these options are calculated automatically using the Gemstone Excel Order Form/Estimate Generator previously described. Prism finished parts are ineligible for any expedited production and shipment. Prism finish paints are created using formulas and advanced sampling for approval is not required. Slight variation from fan deck swatches can naturally occur and will not be considered a defect.

Finishes

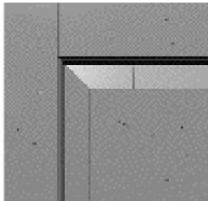

Conestoga stains, paints, and effects. Wood finishes are catalyzed conversion varnish providing the greatest wear resistance of modern wood finishes. Even the painted finishes receive a clear final topcoat for enhanced durability and color consistency. Stained and painted finishes all feature a 10° sheen. Stained finishes without glaze are available in 40° sheen finish by special request.

In addition, our Prism Paint option in painted finishes offers over 1600 color selections from our Sherwin-Williams fan deck allowing for a custom color match to almost any color required. There is a setup cost of \$250 for Prism custom colors or for a custom match stain. Prism also carries a finishing surcharge on all products (custom stains do not). Charges relating to these options are calculated automatically using the Gemstone Excel Order Form/Estimate Generator previously described.

Finish Effects

Brushed Glaze -

- Paints with a brushed glaze effect offer the classic look of a painted basecoat and glaze; this glaze treatment appears to have been applied with a paint brush. Simulated brush strokes in the glaze have been achieved using a precise sanding process prior to the glaze application.

Distressing -

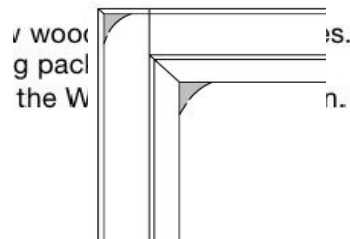

- Level 2 distressing – a random distribution of nicks and impressions, simulated wormholes, razor cuts and cut joints.
- Level 3 distressing – a random distribution of nicks and impressions, simulated wormholes, rasp marks and cracks.

Heirloom -

- The overall appearance of the Heirloom finish is achieved by combining three elements: one layer of Paint material, a glaze application and a combination of specific distressing techniques referred to as the Vintage Distressing Package. Although options exist as to which base color and glaze are chosen, each Heirloom finish must contain these three elements.
 - Vintage Distressing Package includes wear sanding, level 2 distressing, rasp marks and antiquing.
 - Veneers, endskins, plywood and front frames will not receive wear sanding or antiquing and will receive less distressing than doors.

**Antiquing
and Worn
Corner
Sanding –**

- The Wear Sanding option provides an aged appearance to unfinished doors and drawer fronts. On raised panel designs, sanding is applied to the corners of the panel and the outside corners of the framing. Recessed panels, mullions and frame only designs will receive sanding on the outside corners of the frame. Sanding will be random and each corner will vary in appearance.

22 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Weathered Grain

- The Weathered Grain option consists of random removal of surface material from panels, framing and edge profiles. Softer portions of the wood's surface are removed from the product's face, resulting in a highly textured look and feel
- Eligible framing beads: F-1223, Regular and Square only
- Eligible panel raises: P-057, Reverse G-Cove, and plywood center panels
- Eligible edge profiles: L-034, L-149, L-1160 and Machine Edge
- Edge profiles automatically receive the Weathered Grain option

Note: Multiple effects can be combined by selection on the order form. When the first effect is selected, another space appears where a second effect can be added.

23 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Modifications

Gemstone is a custom manufactured-to-order product line, and we pride ourselves on our ability to meet unique and special requirements of our customers. Our automatic pricing takes most customizations into account and charges are self-generating and user friendly. However, certain customizations require additional charges that are to be listed as items in the quote. These items are detailed in the “Modifications” section. On some occasions, special consideration is given to customizations required that have no previously formulated customization charge (due to the unique nature of the request.) Contact customer service in these unique situations where we can determine the appropriate cost of a customization charge by either an additional percentage or flat rate charge or even a combination of both. The percentage or flat rate charge can be manually applied in the two “custom add” columns following custom dimensions columns on the order form.

Sizing - Our cabinets are generally manufactured using 3” increment widths. In the event a custom size is required, please specify by populating a line item with the desired configuration in the next standard size greater than the desired size, then entering the custom dimension in the appropriate custom dimension column for width, height, or depth. The width entered must be smaller than the width of the catalog item chosen. Height and depth can be specified greater than the catalog size and a charge for each is automatically added into the total. Fractional sizes can be entered to the nearest 1/8” on cabinet items, 1/16” on panels, loose parts and accessory doors, etc.

Separate Modification Charges

Corner Clips – Rear clipped corners can be specified by noting the desired dimensions in the special instructions area next to the affected line item. In addition, please add the line item for this charge found in the “Modifications” section of the library of items as in the illustration below. An accompanying diagram is welcome for clarification.

	Cabinet Type	Doors & Drawers	Cabinet Size	List	Finish Ends	Custom Dimensions			Custom Add		QTY	Net Cost	LINE ITEM INSTRUCTIONS
						Width	Height	Depth	%List	\$List			
1	Base	2D	30W 34.5H 24D	634								228.24	clip right rear corner 12 x 12
2	Modifications	Angled Rear Clip	Note Dim. at Right	340								122.40	12 x 12 clip line 1
3													

Pipe Chase cut-out – Drawers and rollouts installed below sinks have gained popularity among consumers. Drawers can be modified to accommodate plumbing service into these cabinets while preserving the desired form and function. A cut-out dimension must be noted and the corresponding item added to the order as with clipped corners above. Pipe chase drawers will not receive branding. If selecting a sink drawer based cabinet from the library, the charge for pipe chases are already factored in and no mod charge is necessary. However, please provide the cut-out size.

Partial Finished Interior – Open cabinets and glass door cabinets found in our library are assumed to have finished interior to match the exterior specified finish and the added cost of this is already calculated in. No callout is necessary for this option. If a finished interior surface needs to be specified that is not ordinarily so, a separate item charge should be listed and the total surface area (in square footage) should be entered as the quantity. Please detail the affected cabinets and provide diagrams if necessary.

24 Gemstone Cabinetry, LLC

Policy and Specification Manual 2025

Recessed Toe Kick End – Toe kicks can be modified as to height and depth, or removed altogether, without charge. Simply note in the comments on the order form. For certain designs, toe kicks can be recessed on the cabinet ends as well. When this option is needed, please note in the special instructions for the line item affected along with the measurement to recess, then add the “Recessed TK End” charge on a separate line with the appropriate quantity (if more than 1).

Door and Drawer Options – Arches and special lite options may be specified for specific cabinets. Please note in the special instructions for the line item affected, then add the charge on a separate line with the appropriate item and quantity (if more than 1).

Drawers can be added where needed if a standard configuration from our library does not align with the requirements of the job. Please note in the special instructions for the line item affected, then add the “Insert Drawer/DF” charge on a separate line with the appropriately sized item and quantity (if more than 1).

Blum Aventos lifts for doors are offered in a wide variety of wall cabinet sizes and types in our standard library. If a lift system needs to be added to any other configuration not normally found, please note in the special instructions for the line item affected, then add the “Add Aventos” charge on a separate line with the appropriate type and quantity (if more than 1). A detailed diagram may be submitted for clarification of design specifics.

Blum Tipon touch release hardware may be selected in two parts. First, by selecting Tipon for your drawer slide selection in the upper heading, all drawers will be converted to touch release Tipon. These are only available with genuine Blum Tandem or Legrabox drawer slides. The additional charge for Tipon is calculated automatically in the item pricing. To add the Tipon for doors charge, please select this item and total quantity of doors affected on a separate line.

Additional shelves or dividers beyond standard can be specified in the same way, by noting in the special instructions for the line item affected, then add the charge on a separate line with the appropriate item approximate size and quantity (if more than 1). We will assume the precise sizing will be the default size for the cabinet noted unless other instructions are given. Additional shelves ordered will be made from same interior material as all other shelving.

Peninsula or Double Entry cabinets can be provided. Please specify in the Line-Item Instructions column to the right of the item. The charge for Peninsula double entry is 50% and should be entered by typing “50” in the %List column, where the order form will then automatically calculate into the net price.

Finishes and touch-up kits can also be supplied.

Samples

A dealer sample kit is available for purchase to assist in presenting and closing jobs. The kit includes:

Gemstone mini-base cabinet showing the use of Maple interior, Dovetail drawer, Tandem slides and transitional wood door/drawer style with painted finish.

15 sample cabinet doors showing a variety of our most popular styles and colors.

Dovetail drawer box containing up to 200 color chips representing all finish categories.

Prism Paints fan deck

Specifications book and catalog

Literature and product sell sheets for distribution to customers.

Additional door samples and color chips not found in the sample kit can be ordered using the order form or by submitting the sample request form. Active dealers who have purchased the sample kit are given a sample allowance of 3 free doors per calendar year for updates and customer samples. Sample doors can be purchased beyond the kit and standard allowance for \$45 each and color chips for \$4 each. We encourage ordering a door sample along with each job ordered to help build your sample door library.

LIFETIME LIMITED WARRANTY

Gemstone Cabinetry (the manufacturer) warrants the original consumer purchaser for as long as they own their home that their Gemstone Cabinetry products will be free from defects in material and workmanship under normal use. This warranty is only applicable to products used in residential applications within the United States and is not transferable to subsequent owners. Should defects in material or workmanship exist during the applicable warranty period in any Gemstone Cabinetry product, the manufacturer will elect at its discretion to either repair or replace the defective material or component, free of charge. This warranty covers only parts and materials of the products supplied by the manufacturer. Not covered under this warranty are countertops, appliances, plumbing fixtures, etc. or the costs, including labor, to remove and reinstall materials and related components such as fittings, appliances, etc.

This warranty shall become void if the cabinets are in any way modified, improperly installed or damaged prior to or during the installation. Furthermore, this warranty will not apply to cabinets damaged by misuse, neglect, abuse, acts of God, or the effects of normal wear and tear.

The manufacturer reserves the right to alter design, specifications and material without obligation to make similar changes to products previously manufactured.

The repair(s) or replacement(s) are contingent upon the current product offerings of styles and construction options within the Gemstone Cabinetry product line at the time of the warranty claim. If a warranty claim is filed after a Gemstone product becomes obsolete, the manufacturer reserves the right to honor the warranty in the best way which may or may not include replacement of the affected component and any other component(s) in the residential application to achieve a uniform appearance with a similar and comparable product style of the originally purchased style.

If components are replaced, the manufacturer cannot guarantee that the finish of these replacements will exactly match the finish and appearance of the components in the residential application due to the natural “aging” of wood or subtle changes that may occur from production run to run over long periods of time. THE MANUFACTURER DISCLAIMS ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Wood and wood veneers may contain character and color variations that occur naturally and are not considered defects. The utmost care and consideration is given to grain, color, and grading procedures when selecting veneers and hardwoods so that the end result is blended and pleasing to the eye, letting the natural beauty of wood show at its best.

Graphic images on our website and in literature are representations of products we manufacture. While we do our best to accurately display products through various mediums, actual samples should be viewed before ordering to ensure that the true nature of the product will be fairly and accurately represented.
